Project Code: DART0049_W2
Project Name: Bright Line Watch
Prepared for: Brendan Nyhan
Interviews: 2778
Field Period: October 05, 2022 - October 11, 2022
Project Manager: Caitlin Collins - caitlin.collins@yougov.com
=====

YouGov interviewed 2778 respondents to produce the final dataset. The frame was constructed by stratified sampling from the full 2019 American Community Survey (ACS) 1-year sample with selection within strata by weighted sampling with replacements (using the person weights on the public use file).

The cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, and region. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on 2016 and 2020 Presidential vote choice, and a four-way stratification of gender, age (4-categories), race (4-categories), and education (4-categories), to produce the final weight.
